DRS WC TARGET GROUP

The DRS WC series offers athletes a set of competition boots made from different plastic blends to satisfy every need. The following chart provides a guideline to help you choose the right boot.

BOOT SIZE OVERVIEW

DRS WC SIZE TABLE

UK	3	4	5	6	7	8	9
SOLE LENGTH	264	274	285	296	305	316	328
MONDO POINT	22.5	23.5	24.5	25.5	26.5	27.5	28.5

GOOD TO KNOW:

- 1) All models that can be used in FIS races have the addition FIS in the product name.
- 2) All models that do not have FIS in the name are exclusively for juniors and masters.
- 3) The order of the article numbers is based on the age groups and the competition level. Consequently, the lower article (numbers) are for the kids and junior segment. The higher the article number, the higher the competition level.

KEY FEATURES

MULTILAYER WOODCORE

The combination of beech and poplar allows for an extremely resilient stickwood core, consisting of hard-wood in the binding area and somewhat lighter wood in the remaining area.

WORLD CUP ASH WOODCORE

Ash is a hard wood. The long fibers stretch when the ski initiates the turn and contract again when the end of the turn is reached. For our WorldCup und Master models, we use

the restoring force of ash to make the ski more solid and stable on the slope and at the same time to build up pressure on the edge. Especially at the shovel and the tail we can build the ski harder and therefore improve the dynamics as well as the smoothness.

FINISH

Our skis can be used directly in racing without processing, because our bridges are already delivered with a suspended angle. This is a huge advantage for later preparation. All our models are coming with dedicated tuning according to each individual purpose and relevant target group. Check out more information on page 26.

WORLD CUP WOODCORE

In order to offer the best combination for optimal ski bending, we use a special mixture of 50% ash and 50% poplar wood for

the Worldcup Woodcore. The ash acts like a restoring force, as the long fibers stretch when the ski initiates the turn and contract again when the end of the turn is reached. This makes the ski stronger and more stable on the slopes. Thanks to the poplar parts, an optimum balance of weight is reached.

ZEBRA BASE STRUCTURE

Völkl invests millions in a new base structure machine. Why?

POLISHED SKI BASES ENHANCE ...
 ... greatest gliding characteristics
 ... optimal base treatment options
 ... long lasting effects

DEDICATED SKI BASE STRUCTURES HAVE A STRONG EFFECT ON ...
 ... agile, precise & reliable turn initiation
 ... tighter turns with less effort
 ... smooth drifting

TAILORED TECHNOLOGIES

One of our latest technologies is Tailored Fibre Placement. In this innovative manufacturing process the Tailored Carbon Tips are produced by embroidering the individual carbon fibers onto a carrier material. This allows them to be positioned exactly along the stress lines, opening up plenty of possibilities, for performance at the front of the ski, which has a decisive influence on the handling of the ski. The stiffness, torsion and thus the skiing characteristics can be specifically adjusted via the fiber thickness and millimeter-precise alignment. In this way, the fibers guide the dynamics to the areas of the ski where they are needed. The visibly integrated Tailored Carbon Tips are light, allow an agile shovel reaction with less effort and quickly build up energy. The Tailored Carbon Tips thus reach a next level of precision, direct tip response and active skiing pleasure.

SCAN ME

DALBELLO

KEY FEATURES

SLIM & COMPACT SHAPE WITH TWO LASTS

LAST 92: With one of the most exacting lasts on the market, at 92 mm the DRS WC brings the power closer to the sole of the foot for more consistent and direct transmission of energy.

LAST 97: The shape of the DRS in the 97 mm last offers a perfect combination of the precision and performance of WC boots with the opportunity to enjoy the entire day of skiing without pressure points or pain. The DRS wraps the entire shape of the foot allowing complete and direct power transmission.

SPECIAL LIFTERS & CANTING SOLES

You can install a pair of lifters with the height of 5 mm (or even 3mm for the WC version). After the installation, boot toe and heel heights must be routed to restore the original height dimensions.

For the DRS 97 lifters are available after-market and offer more grip than the WC version. In addition, GripWalk is available on even the highest performing Dalbello models! With the option of mounting special GripWalk lifters, the DRS 97 mm last can be upgraded with more grip and better walking comfort with no loss of performance.

FLEX & CUFF COMBINATIONS

The stronger the athlete, the harder the plastic of the boot. Stiffer materials allow a direct transmission of the forces to the ski. Size by size the wall plastic thicknesses change according with the entire volume and construction of the boots. This is the reason why the same flex letter on the smallest sizes are softer than the biggest sizes.

BOOTBOARD TUNING OPTIONS

Stance can be adjusted by grinding the boot board: different heights allow different performance characteristics depending on the athlete's needs. In the heel area there are two holes with two different depths. Grinding one or two steps it is possible to vary the bootboard's inclination, in proportion to the developments in the series. If you polish inside the reference area, you get an excellent set up, without margin of error.

RACE BUCKLES & DEDICATED BASE PLATES

Specific DRS buckles are 3D-shaped to follow the ergonomic contours of the boot, ensuring precise buckle tension. Each buckle is specifically designed for its size and position, including the base plate, which is curved to match the boot's shape

SOLE ARCHITECTURE & REBALANCED HEIGHT IN COMPLIANCE WITH ISO NORM

Out of the box, the sole dimensions on the heel and toe are in compliance with ISO 5355. Moreover, the DRS is also within the FIS stand height regulation of 43 mm.

LINERS & TONGUE

The WC liners are made with the highest quality materials to maximize feel and optimal vibration absorption.

- 1 Velcro spoiler
- 2 Specific collar
- 3 WC lining & padding material
- 4 Lorica outer tomaia
- 5 Tongue after customization

MARKER

COMP HEEL

- Increased vertical energy absorption
- 16mm elastic travel
- Increased boot lug purchase
- Wider contact points and heel connection
- Best power transmission
- Optimized energy distribution

COMP TOE

- One piece attachment with three point mounting pattern
- Absorbers in main body provide more constant release value and a more forgiving performance
- Great power transmission, precision and control

PISTON CONTROL

The inner life of the World Cup Plate. A hydraulic oil piston enables sensational performance on the race track. The piston only reacts to negative ski impacts. This noticeably improves the turn initiation, increases the edge grip and allows more precisely controlled turns.
