LANDSCAPE
A FREERIDE COLLECTION BY K2

ALCHEMIST

Terrain: Powder, Sidecountry, Backcountry, Resort.
Riding Style: Confident and Aggressive
Ability Level: Advanced to Expert

TECH

- SnoPhobic Topsheet - Textured snow-shedding top sheet technology.
- SpaceGlass™ Tip - Reduces swingweight, reduces tip chatter, increases edge hold.
- Spectral Braid™ - Allows torsional flex to be dialed in independently of tip and tail flex.
- Carbon Power Fork™ - Twin carbon inlays in the tail of the board for aggressive response.
- recess3D - Reduces weight and board chatter without sacrificing strength.
- S1 Core - Renewable, durable, and responsibly sourced - 5 Year Warranty.
- Wax-Infused Sintered 4001 Base - Hard, resilient, and ultra-fast. Wax infused for premium glide.

KEY FEATURES

Directional Camber Profile, S1 Core, Triax Glass, Spectral Braid, SpaceGlass™, recess3D, Carbon Power Fork, Wax-Infused Sintered 4001 Base, 2x4 Inserts

ANTIDOTE

Terrain: Powder, Sidecountry, Backcountry, Resort.
Riding Style: Big Mountain Freeride/Freestyle
Ability Level: Advanced to Expert

TECH

- ICG™ 20 Triax Carbon Fiberglass - Triaxial fiberglass weave w/ 20 integrated carbon stringers.
- 3D Base Contour - 3mm of spoon-like contour on nose and tail increases predictability.
- SpaceGlass™ Tip/Tail - Reduces swingweight, reduces tip chatter, increases edge hold.
- recess3D - Reduces weight and board chatter without sacrificing strength.
- Carbon DarkWeb™ - Increased board response and stability and adds pop to tip and tail.
- A1 Core - Lightweight, snappy, durable, and responsibly sourced - 5 Year Warranty.
- Wax-Infused Sintered 4001 Base - Hard, resilient, and ultra-fast. Wax infused for premium glide.

KEY FEATURES

Twin Camber Profile, A1 Core, ICG™ 20 Triax Glass, Carbon DarkWeb™, 3D Base Contour, SpaceGlass™, recess3D topsheet, Wax-Infused 4001 Sintered Base, 2x4 Inserts

SNOWBOARD TECH

PERFORMANCE/FEEL

When it comes to choosing the right snowboard for you, it is important to take height, weight, stability, power transfer, sidecut, flex, and more into consideration. Flex is often seen as the most important - as it will dictate how you are able to control your board on-snow. To simplify, we measure our flex spectrum using the scale of PLAYFUL to PRECISE.

1 2 3 4 5 6 **7** 8 9 10
PLAYFUL PRECISE

In general, more PLAYFUL boards are great for learning how to link turns, press rails, and overall board handling.

In general, more PRECISE boards are often more stable at speed, have more pop, and have more energy than their playful counterparts.

RAILS/PARK
Boxes, rails, bonks, and jibs on-hill or in the streets.

JUMPS/PIPE
Kickers, hips, transitions, and stunt-ditches.

GROOMERS
Fresh corduroy.

POWDER
That deep, deep white goodness

WARRANTY

We stand by our snowboards. Unless otherwise stated, K2 places a five (5) or three (3) year warranty on all 2023 Snowboards, guaranteeing that they are free of defects in regards to materials or craftsmanship.

5YR WARRANTY

5 YEAR WARRANTY
All snowboards featuring our A1, S1, and Bambooyah™ Cores come with a five (5) year warranty against manufacturer's defects.

3YR WARRANTY

3 YEAR WARRANTY
All K2 Snowboards come with a three (3) year warranty against manufacturer's defects.

K2 EXCLUSIVES

VOLUME SHIFT™ | We've moved volume from the tips and tails of traditional snowboard shapes and placed it underfoot where it can be better controlled. This makes a wider, shorter design that maintains the same float and stability of a traditional board, but increases mobility and maneuverability. More slashing and better lines in the trees are now a reality.

HYBRITECH™ CONSTRUCTION | Backed by years of rigorous testing, Hybritech is the lightest weight, most durable snowboard construction on the market. Removing all excess sidewall material in the tip and tail and adding a 3D capped edge to increase the bond strength of the fiberglass and decrease the swing weight of the board is what makes Hybritech so revolutionary. Our boards will spin faster, maneuver easier, and last longer than any other boards on the market.

SINTERED P-TEX SIDEWALLS | By using a profiled Sintered 4000 P-Tex material for the sidewalls in all of our snowboards, we are able to offer riders a host of benefits. P-Tex sidewalls are durable and impact resistant, provide a smoother, damper ride, and helps us to reduce waste in the production process.

TWEAKEND™
We've extended the rocker all the way out to the absolute ends of the board, and for good reason! This unlocks new ride-able surface area and gives you a bigger, more stable platform to press, float, and land on.

PROFILES

DIRECTIONAL CAMBER PROFILE
The most responsive camber profile in the line features camber running from in front of the front foot to the tail of the board with slight early rise in the nose. This gives the rider the most precision and control possible in any terrain while still floating effortlessly in the deep stuff.

DIRECTIONAL COMBINATION CAMBER PROFILE
The best of both worlds. By blending both traditional Camber and Rocker profiles, Combination Camber gives you all the benefits of both; the pop and precision of camber, and the float and predictability of rocker.

DIRECTIONAL ROCKER PROFILE
An all-purpose profile designed to be the perfect companion for the all-terrain snowboarder. Directional Rocker Profile has medium-rise rocker in the tip, flat in the middle of the board, and low-rise rocker in the tail, allowing for effortless turns on hardpack and ample float in soft snow and crud.

DIRECTIONAL ROCKER PROFILE
A terrain and powder specific profile, designed to be ridden in deep or soft snow. A rockered, early rise tip provides float and lift in deep snow, and a flat tail provides the perfect platform to finesse or power turn while snorkeling through the deepest of days.

TWIN CAMBER PROFILE
Full camber all the way out or near the contact points provides an ultra-responsive and stable platform for powerful and precise freestyle maneuvers in all terrain or conditions, and delivers most pop available in the K2 line.

TWIN COMBINATION CAMBER PROFILE
The best of both worlds. By blending both traditional Camber and Rocker profiles, Combination Camber gives you all the benefits of both; the pop and precision of camber, and the float and predictability of rocker.

TWIN ROCKER PROFILE
A versatile twin-rocker design built to dominate any freestyle line. Just enough rise in the tip and tail to create a loose, buttery feel without sacrificing pop and response.

CORES

A1 CORE | Lightweight, snappy, and durable, our ALL NEW! A1 Core is made from three renewable species of timber - Bamboo, Aspen, and Paulownia. Aspen-dominant to highlight the snap and response of this wood, we've combined it with Bamboo at 30° underfoot to increase strength, supercharge the edge-to-edge response, and increase the pressure distribution along the edge. We've also placed lightweight paulownia in the tip and tail help to reduce swingweight.

S1 CORE | The smooth-flexing cousin to our A1 core, our NEW S1 Core is designed to be damp underfoot and stronger than hell. Constructed from Bamboo, Aspen, and Paulownia, the S1 Core let's each wood do what it's best for. Tip-to-tail Bamboo stringers add snap, durability, and damping underfoot and are balanced out by lightweight paulownia in the midbody, tip, and tail help to reduce swingweight. Underfoot, Aspen and Bamboo are placed at 30° angles to increase strength, supercharge the edge-to-edge response, and increase the pressure distribution along the edge.

BAMBOOYAH™ BLENDED CORE | Renewable and stronger than hell. Bamboo possesses a higher tensile strength than steel and withstands compression better than concrete, and that's why we offer these boards complete with a five year warranty.

BAP CORE | Bamboo. Aspen. Paulownia. We've blended three species of renewable timber to assemble a core that's strong, lightweight, and designed to enhance dampening without the addition of other materials.

ASPEN CORE | A single species of wood ensures consistency - giving riders the advantage of a proven flex, durability, and snap.

RHYTHM CORE | Uniquely shaped and designed to complement the mechanics, geometry, and riding style of female snowboarders, we rely heavily on aspen to make this core snappy and agile, while placing lightweight paulownia in the tip and tail to reduce swingweight and ease turn initiation. lightweight.

CORE ADDITIVES

SPACEGLASS™ | An American made Aerospace grade preure fiberglass core insert used to provide unmatched structural performance at reduced weight. SpaceGlass™ inserts increase edge hold along contact points, reduce chatter, and provide unequaled durability.

SPECTRAL BRAID™ | UPDATED FOR 22/23 | K2's Patented (U.S. Patent No. 10,857, 445) Spectral Braid is a first of its kind variable angle reinforcement that allows for precision tuned torsion and flex by altering the fiber orientation along the length of the snowboards. This makes our snowboards feel lively, energetic, and remarkably composed.

RECESS3D | By reducing the amount of materials in low-stress zones, we're able to reduce the swingweight of your snowboard, while also reducing chatter in the tip and tail - all without sacrificing strength.

CARBON POWER FORK™ | Pre-cambered Carbon Power Fork™ additives are strategically shaped to offer greater response and energy return by increasing the width toward the tail - allowing for more material to be engaged, and more energy to be created the harder the tail is flexed. Add snap to ollies, increase edge pressure, and give energy in and out of turns.

CARBON BACKBONE™ | Tip to tail cambered carbon insert running down the center of the snowboard adds response and rebound for precise control on approaches and landing heavy tricks, and adding snap to every ollie.

OLLIE BAR™ | Built in place in a pre-loaded cambered shape and placed between the binding inserts, the Ollie Bar™ helps by adding extra snap between the feet to increase pop from the highest load-zone.

CARBON TORQUE FORKS™ | Carbon fiber stringers in a V-shape, extending from just outside of the inserts to the contact points in the tip and tail for added pop, responsive, and stability.

CARBON DARKWEB™ | A carbon fiber X-pattern that is strategically placed underfoot from edge-to-edge to speed up transitions, increase control, and increase underfoot strength.

UNDERFOOT REINFORCEMENT | Standard across all snowboards in the K2 Snowboarding collection, additional fiberglass reinforced binding patches placed underneath the binding mount area to increase board strength and decrease board breakages outside the binding.

FIBERGLASS TECH

ICG CARBON GLASS™ | Integrating tip-to-tail carbon fiber stringers into fiberglass layups ensures a smooth power release in and out of turns while increasing pop, liveliness, and longevity of the snowboard without adding unnecessary rigidity. We offer ICG™ Glass in two variations; ICG™ 10 Biax, ICG™ 10 Triax, and ICG™ 20 Triax.

TRIAxIAL GLASS | A glass laminate with diagonal layers that adds torsional stiffness for increased stability and improved edge hold. The fibers three layers of fibers are woven at 45°, 45°, and 0°. This makes for a more responsive ride longitudinally and torsionally.

BIAXIAL GLASS | Smooth all-purpose performance with a no-frills design. Fibers are woven together at 0° and 90°, creating a more forgiving flex pattern.

BASES

3D CONTOUR NOSE | 3D contour (spoon) that is gradually blended from the running surface deflects soft snow, eases turn initiation, while remaining predictable on hardpack. Available on both Antidote (3mm) and Special Effects (8mm) models.

CARBON INFUSED 5500 SINTERED BASE | Fast, light, and strong. Our Carbon Infused 5500 base is the cream of the crop. By adding carbon to a sintered base, we've increased wax retention and decreased drag for a faster, smoother ride.

WAX INFUSED SINTERED 4001 BASE | Built using the hardest and fastest Sintered base material on the market from Crown, the Wax-Infused Sintered 4001 holds wax longer than other Sintered bases for a smoother glide, longer.

SINTERED 4000 BASE | Our Sintered 4000 base absorbs wax deep into the material for relentless glide and unrivaled durability.

EXTRUDED 2000 BASE | Our low-maintenance Extruded 2000 base delivers a consistent glide and is easy to both maintain and repair.

STONE GROUND BASES | K2 offers a Stone Ground finish on boards leaving directly from our factory. This ensures that our snowboards arrive to our customers with a flat, open p-tex base that is structured to perform well in all snow conditions, properly absorb wax, and glide faster than a belt sanded board.

CATCH-FREE TUNE | By bringing the contact points out of the snow, this beginner-friendly tune ensures linking turns without a catch. This small amount of bevel in the tip and tail aids in more confidence throughout the learning curve and unlocks faster progression on all terrain.

SNOWBOARD TECH & SPECS

SNOWBOARD TECH & SPECS

BOOT TECH

SHELL LACING

BOA®

**THE BOA®
GUARANTEE**

THE ORIGINAL BOA® BOOT COMPANY | Introducing BOA® Fit System to the snowboard market well over a decade ago, K2 believes that now, more than ever, BOA® is a standout advantage.

FOCUS AND ZONAL BOA® FIT SYSTEM | A two reel BOA® Fit System that allows for the upper and lower zones of the boot to be tightened independently.

BOA® FIT SYSTEM AND COILER BOA® FIT SYSTEM | A cable and reel based lacing system that creates even tension and easy lacing operation. This system features low friction guides for even tightening. BOA® Coiler works to automatically retract lace slack so your boots stay nice and neat.

TX3 BOA® LACING | BOA®'s first textile lace in the snowboarding category, TX3 is constructed from recycled PET with a structural core. This lace provides a softer, more flexible look similar to the characteristics of a traditional lace but the superior closure of a BOA® system.

TRADITIONAL LACE | No wires, reels, or pulls needed. Our braided textile laces offer a tried and true feel and customizable fit.

45° LACE LOCK | Positioned at the transition to the instep to give you a quick and easy ability to zonally lace your boots and keep them that way.

NEW NO-SNOW LACE COVER | Protects traditional laces from snow, moisture, and abrasion. Waterproof zipper.

LINER LACING

CONDA

FIT ON THE FLY

CONDA™ WITH BOA® | UPDATED! | A patented K2 liner lacing system that uses a urethane harness to gently hug your ankle, creating unrivaled heel hold. BOA® Conda™ allows for adjusting liner tightness and heel hold on the fly from outside of the boot, even with gloves on.

3-POINT HARNESS | The 3-Point Harness is a straightforward solution that doesn't skimp on support. This system aims to optimize heel hold, while providing ankle support and unrivaled stability to help reduce fatigue. A taller, Pro Version is found on Orton and Format models for additional support.

REMOVABLE 3-POINT HARNESS | Now with the ability to choose your fit with our removable harness that locks to the shell to give you the choice of the amount of hold you want. Found on the Taro Tamai Snowsurfer LS and Taro Tamai Snowsurfer models. □

FAST-IN | No frills adjustment and locks solid for all day fit and comfort. Easy to use and comfortable all day long.

LINER CONSTRUCTION

K2 AND INTUITION® | Using Intuition® EVA, a patented foam developed specifically to be lightweight, moldable, flexible, and durable, K2 aims to create the most comfortable and best performing snowboard boot liners in the world.

INTUITION® SPACEHEATER™ | A liner designed for comfort and warmth, from start to finish. It features reflective heat blanket panels that work to trap heat in and keep cold out. These reflective heat blankets work alongside heat moldable Intuition® foam, internal J-Bars, and 3D molded dual-density EVA insoles to keep your foot comfortable and warm all day long.

INTUITION® PRO FOAM 3D | Our most supportive liner, featuring a high-density Intuition® foam for added support without sacrificing comfort. This liner features both internal and external J-Bars around the ankles, where extra support is needed.

INTUITION® CONTROL FOAM 3D | Built with a blend of high and medium density Intuition® foam, this is our most versatile liner. With internal and external J-Bars and a 3D molded EVA insole, the Control Foam 3D liner is built to provide all-day comfort and support.

INTUITION® COMFORT FOAM 3D | Built for comfort and long-lasting fit, this liner is a softer build and features both internal and external J-Bars for added ankle support and heel hold.

COMFORT FOAM EVA | Focused on out-of-the-box fit and lasting comfort, the Control Foam liner has a forgiving flex and is packed with internal J-Bars for added ankle support.

BOOT MATERIALS

ENDO™ CONSTRUCTION | A K2 Snowboarding exclusive, Endo™ Construction allows us to alter the flex, response, and rebound of a snowboard boot without adding extra materials (extra materials = extra weight). By replacing additional materials with an injected heel-counter, adding extra rebound is as easy as a formula change and helps us to provide a more consistent flexing, longer-lasting snowboard boot.

HARSHMELLOW™ | Harshmellow™ is a magical dampening system that replaces industry standard foam dampening materials. Harshmellow™ is strategically placed to dampen vibration underfoot to provide for a more "quiet" feel underfoot, reduce vibration from impact, and reduce fatigue while snowboarding.

REINFORCED RUBBER | Abrasion resistant reinforced outsole rubber is placed in areas of high stress to extend the life of the boot and increase durability.

HDR PREMIUM SYNTHETICS | Eight times more durable than a standard polyurethane material, HDR Premium Synthetics is a proprietary synthetic durable finish designed for extreme conditions. The dynamic resin system provides exceptional abrasion and durability performance well beyond standard synthetic materials.

SPACEHEATER™ FOOTBED | We've gone the extra mile to ensure that you stay warm and comfortable. By adding a reflective SpaceHeater™ material to the footbed on our boots, we're helping to trap heat inside the shell. Found On: Taro Tamai Snowsurfer (+ LS), Aspect, Thraxis, Waive, Holgate, Orton, Ender, Hanford, Maysis, Format, Estate, Trance, & Contour models.

S'CAFE COFFEE MESH | With functionality and sustainability in mind, K2 coffee mesh is made from recycled post-consumer coffee grounds that is combined with post consumer recycled polyester. This mesh enhances odor control and moisture management of our standard lining mesh and is made from 95% recycled material with no added chemicals.

NEW HARSHMELLOW™ PRO/PLUS FOOTBEDS | New for 22/23, we've completely redesigned every footbed we put into our boots. Three separate compositions, Pro, Plus, and Base, now all incorporate K2's proprietary Harshmellow™ damping into the layup of the footbed. The result is superior vibration absorbing and comfort for all-day excursions into the backcountry or hiking and riding around the resort.

OUTSOLES

VIBRAM® ROLLSOLE OUTSOLE | Designed with mobility in mind, the Roll Sole™ Outsole aims at providing additional range-of-motion without sacrificing any support (thanks, Harshmellow™). This outsole is ergonomically shaped and allows riders additional maneuverability for next-level heelside carves and surf-style vibes.

VIBRAM® MOUNTAINEER OUTSOLE | The Mountaineer outsole is the first of its kind. An outsole designed specifically for snowboarding and the mountaineering that is required to get to those larger-than-life lines. With Vibram® rubber and a traditional lug design, this crampon compatible outsole is built to work with all the gear you need.

VIBRAM® V5 OUTSOLE | Vibram® V5 Outsole features a full EcoStep rubber (30% regrind) with and Harshmellow™ pods under the toe and heel to reduce noise underfoot. The V5 Outsole is the perfect combination of sustainability and performance.

THIS GRIPS! PREMIUM RUBBER OUTSOLE | A K2 exclusive built to offer the best possible performance at the lowest possible weight. An EVA midsole with Harshmellow™ pods makes this quiet underfoot, and a dual rubber compound provides unmatched grip for the parking lot and the boot pack.

NEW THIS GRIPS! PREMIUM FREESTYLE OUTSOLE W HARSHMELLOW™ | Premium dual-density rubber outsole featuring K2's proprietary This Grips™ Compound. Taking inspiration from modern skate footwear, our new cupsole outsole features a rounded heel for less drag while hiking, a wrapped arch for support and stability, and vibration damping Harshmellow™ in the heel and forefoot.

ROLLSOLE™ OUTSOLE | The RollSole Outsole aims at providing additional range-of-motion without sacrificing grip or support. This outsole is keeps the overall weight of the boot down while offering extra mobility side to side.

RUBBER LIGHT OUTSOLE | Full rubber bottom for maximum grip and durability is matched with our impact absorbing Harshmellow™ technology - reducing fatigue and providing a quiet feel underfoot.

PHYLIGHT™ OUTSOLE | This EVA outsole offers a uniform flex and the durability of a rubber outsole in a lighter-than-light package.

LOW PRO OUTSOLE | A lightweight solid rubber cupsole that grips hard and lasts long.

CLICKER™ X OUTSOLE | The Clicker™ X outsole features exaggerated rocker for walkability and a full rubber outsole for both hikability and durability. Harshmellow™ is integrated in the midsole and is all securely layered around our Clicker™ X technology.

BRIGHT FUTURE OUTSOLE | Lighting up the stoke and fun for groms everywhere, this LED light powered outsole is built to be lightweight and have tons of grip for lasting the whole day.

LASTING

K2 Snowboarding uses a 1-to-1 lasting system for every liner and shell throughout the entire collection. This ensures the customer will get the best possible fit when they put their foot into a K2 snowboard boot. □

TRADITIONAL LAST | Our Traditional Last is based around a D Last with 11° of forward lean. Available on Boundary, Lewiston, Darko, Raider, Market, Kinsley, Sapera, Cosmo, Haven, and Belief.

PERFORMANCE LAST | Our Performance Last is based around a D Last through the forefoot with a more performance-focused heel pocket, and also features 11° of forward lean. Available on Aspect, Thraxis, Waive, Holgate, Orton, Ender, Hanford, Maysis, Format, Estate, Trance, Contour, Thraxis Clicker™ X HB and Maysis Clicker™ X HB models.

WIDE LAST | Our Wide Last is based around an E & ½ Last with 11° of forward lean. Both shell and liner at 7mm wider than our traditional last and boot shell. Available on Maysis Wide.

6+3 LAST | Unique to the Taro Tamai Snowsurfer shell, our 6+3 last features a more relaxed feel and is built to encourage turns. By reducing forward lean 6°, it provides a more upright feel, and it is met with 3° of medial lean that helps to bring the knees into the natural riding stance. Available on Taro Tamai Snowsurfer LS, Taro Tamai Snowsurfer.
