

BOARDS

Style Name**SPLITPIG****Style Number****R2002026****Overview**

The SPLITPIG is the WARPIG shape that breaks in half so you can walk up mountains and thrash every feature on the way down. It's got the flex of a WARPIG with a Carbon Race Base and a little bit of camber for the climb. Featuring a brushed nylon topsheet to reduce weight while shedding snow. The split core features a Slimewall® center sidewall for maximum vibration damping. The Channel Binding Mounting System allows for more stance options and a much easier setup than standard split inserts, which limit stance options. The SPLITPIG comes with Pomoca Climb 2.0 skins custom fit to the shape and a canted binding mounting puck that works with some split bindings on the market. Forget custom-cutting your skins and we'll cut to the chase: The SPLITPIG will allow you to access more off-piste locations in the mountains

Style Name**SUPERPIG****Style Number****R2102006****Overview**

The SUPERPIG infuses high-end tech into our best-selling WARPIG shape for an elite all-mountain deck. If you find yourself seeking out something big and bad, avoid the other pigs and take shelter with the SUPERPIG, because this board is built like a brick shithouse. The SUPERPIG is the same shape as the WARPIG, just with a lot more tech and a little bit of camber. Size the SUPERPIG down 6 to 10cm's from your standard size because of its innovative shape. The SUPERPIG rides like a very angry WARPIG. This board is made for the demanding rider that wants the aggressive thrash style of the WARPIG with camber and a little more stiffness. Don't let the shape fool you—this board will go anywhere and do anything. Of course, it will still ride powder with its short, wide shape, but you'll be really impressed at how fast the SUPERPIG goes from edge to edge on hardpack and the pop the camber provides. A Tapered Bi-Radial Sidecut maximizes grip and maintains speed in all conditions. Carbon Infused Glass provides extra pop and new Carbon Slim Walls reduce weight, increase damping, and increases energy transfer to enhance response and stability. Carbon Array 5™ provides extra pop without adding stiffness while the low friction Race Base is made from a carbon-infused sintered base material to ensure a fast ride.

Style Name**WARPIG****Style Number****R2102007****Overview**

The Warpig evolved. The 2021 Warpig features all new Slim Wall technology. Slim Wall is the evolution of Ride's Roll-in Construction to its most extreme limit. By creating a fully 3-D composite structure over our proprietary Slimewall® material, this revolutionary technology results in more efficient energy transfer, lighter weight constructions, and even better damping. The WARPIG shape has won multiple snowboard tests for both all-mountain and freestyle categories, which is a rare feat in modern snowboarding. The versatility of the WARPIG is unmatched. This board will allow you to lay down carves, hit huge jumps and ride big mountain lines. The WARPIG sees the entire mountain as an opportunity to thrash at full speed. A Tapered Bi-Radial Sidecut maximizes grip and allows the WARPIG to transition from edge-to-edge like a traditional narrow snowboard while getting the float and stability of a wider modern deck. A Performance™ Core combines Aspen, Bamboo, and Paulownia wood to provide the perfect balance of strong and light. The WARPIG is a battle-tested all-mountain board for intermediate to advanced riders who aspire to crack the skull of winter and feast on its delicious pink insides.

BENCHWARMER

Style Number
R2102027

Overview

The all new Benchwarmer is an aggressive twin shape suited to riders seeking hardpack performance in the park. The Benchwarmer offers our most aggressive camber profile for the riders demanding a precise and crisp ride. The Benchwarmer is at home on the big line of the park and on firm snow. The Twin Hybrid Camber provides stability for jumping as well as aggressive high-speed turns. Asymmetric shaping improves heelside turn initiation and control with different radii for the heel and toeside edges. Carbon Array 3™ gives you extra pop without adding stiffness. New Carbon Slim Walls reduce weight, increase damping, increase energy transfer and enhance response stability and durability. The Benchwarmer is a performance-focused twin suited for intermediate to advanced riders looking for hard snow performance in a snappy, predictable twin shape.

PSYCHOCANDY

Style Number
R2102015

Overview

The PSYCHOCANDY has additional sizes this year to accommodate all riders. The shape is based on the innovative WARPIG, so the board is designed to be ridden 3 to 6 cms shorter than your standard board and approaches the mountain with the same ideology attitude that the WARPIG is known for. A Tapered Bi-Radial Sidecut maximizes grip and allows the PSYCHOCANDY to maintain speed in all conditions. Carbon Slimewalls® enhance response and stability. The PSYCHOCANDY is a directional all-mountain board designed to ride like a WARPIG so you can tackle any and all terrain the mountain has to offer, be it park, pipe, pow or slush.

Style Name**ZERO****Style Number****R2102028****Overview**

The all-new Zero is a unisex snowboard that knows no boundaries. It can be ridden by anyone, anywhere, at any time, thanks to Twin Hybrid Rocker and Asymmetrical Quadratic Sidecut. The timeless graphic is a throwback to snowboarding's days of classic, simple and unique look but it's packed with technology to mirror today's landscape of innovation, with features like Flat Kick Tips on the nose and tail and a Performance™ Core to give you extra stability in the park and the streets. A favorite of team riders Jill Perkins and Reid Smith, the Zero is the next big thing in the RIDE line.

Style Name**TWINPIG****Style Number****R2102010****Overview**

The TWINPIG got an upgrade! Now featuring all-new Slim Wall technology for 2021. By creating a fully 3-D composite structure over our proprietary Slimewall® material, this revolutionary technology results in more efficient energy transfer, lighter weight constructions, and even better damping underfoot. The TWINPIG is a twin version of our most popular WARPIG model. Our engineering team took what we liked about the versatility and aggression of the WARPIG and packaged it in a twin shape for someone looking for more freestyle performance while still approaching the mountain with a “thrash everything” mentality that the PIG series is known for. Size the TWINPIG down 3 to 6 cms from your standard twin to take advantage of its unique shape and profile. The TWINPIG isn't as wide as the WARPIG, but it's still wider than a traditional twin shape. The asymmetrical shaping improves heelside turn initiation and control with different radii for the heel and toeside edges. This allows the wider platform to effortlessly transfer between edges. A sintered base supplies a faster, more durable ride. The TWINPIG is a park-focused deck that packs all the fun of our WARPIG into a twin shape and is suitable for all ability levels.

Style Name
COMMISSIONER

Style Number
R2102001

Overview

The Commissioner is made for a rider that demands the ultimate high-speed performance. This board will go as fast as you want to without flinching. From powder and groomers to chop and chunder, the Commissioner will power through all of it. We've used every technology available to make sure this board holds up to the most demanding speed freaks on the mountain. A Tapered Elliptical Progressive Sidecut allows for exceptional turn initiation and follow through. A laser cut aluminum/carbon fiber topsheet increases high-speed control. A 100% Paulownia core reduces weight and increases flex properties for snappier turns. The low-friction Race Base is made from a carbon-infused sintered base material to ensure a fast ride. The Commissioner is designed for intermediate to high-level riders seeking high-speed all-mountain terrain.

Style Name**MTNPIG****Style Number****R2102002****Overview**

The MTNPIG is completely redesigned for 2021. The new MTNPIG has been reshaped to keep the best parts of the previous design but to be a little more forgiving and quicker like it's pig brethren. The addition of the new split tail tech allows for more dynamic turn shape and board flex through turns. Still the most aggressive of the Pig series boards. The MTNPIG is designed for high speed turns. Ride the MTNPIG in your standard board length—unlike the rest of the Pig series, we don't suggest sizing down on this model. The half-moon split tail shape helps it sink in deep snow while providing a long effective edge, increasing overall edge hold for sketchy situations. Tapered Linear Quadratic sidecut allows for smooth turn initiation and powerful support through the turn without losing grip. Carbon Slim Walls reduce weight, increase damping, increase energy transfer to enhance response and stability while Carbon-Infused Glass provides extra pop. The MTNPIG is running wild and fast through the mountains, growing fat on powder, and should only be approached by an advanced rider.

R2102003

Overview

The Algorhythm quickly turned into a team and staff favorite at Ride. The versatility of this shape is unmatched. This high-end all-mountain Directional Twin Hybrid Rocker stick is designed to do everything. From park jumps to pow lines to high speed groomers, this board won't disappoint. The Algorhythm will feel comfortable and familiar to snowboarders looking to up their game. Quadratic Sidecut improves turn initiation/exit and edge grip. A Performance™ Core combines Aspen, Bamboo, and Paulownia wood to provide the perfect balance of strong and light while Carbon Array 5™ provides extra pop without adding stiffness. This high-end all-mountain directional twin is far superior to some one-trick pony freestyle snowboard.

Style Name
BERZERKER

Style Number
R2102004

Overview

The Berzerker is designed by one of the world's smoothest snowboarders, Jake Blauvelt. Jake wanted a board that matched his smooth and effortless style in all terrain and conditions. You'll be impressed at how smooth the transition between turns is because of the tip rocker and a small amount of taper in the tail that improves edge-to-edge speed and float in powder. The Tapered Quadratic Sidecut has been enhanced to improve stability and edge hold. Carbon Slimeroads® 2.0 have carbon for pop and a urethane core to smooth out the landings. The Berzerker is built for an all-mountain rider looking for performance. Like a Viking longship, the Berzerker is designed to sail in the shallows or plow through the deep, cut through ice, and take you to snowboard Valhalla. Pay attention to the waist width, because the standard sizes run a bit narrow and are optimized for a smaller boot. The wide sizes are more mid-wide, providing a good option for the size 11, 12 or 13 boots out there. If you've got a bigger foot or prefer a wider ride, check out the Algorithm or Pig Series.

Style Name
BURNOUT

Style Number
R2102005

Overview

The Burnout does its dirty work in the park and streets. The unique sidecut design—boasting a straighter tip and tail radius blended with an aggressive mid-section—allows the rider to track straight in and out of features but still lay down a carve when needed. This board is designed to meet the needs of the modern freestyle rider. The Linear Twin Sidecut design paired with Flat Kick Tips increases underfoot width, enhances leverage on landings, increases edge hold through turns and improves stability on a flat base. Carbon Slimewalls® enhance response and stability without adding stiffness. The Burnout is a high-end twin for an intermediate to advanced rider looking to avoid the stress and frustration commonly associated with riding the same old high-end freestyle shape.

SMOKESCREEN

Style Number
R2102023

Overview

The all-new Smokescreen is catered to the rider who wants to take their all-mountain skills to the next level without sacrificing anything in engineering innovation. The Directional Hybrid Rocker board comes equipped with Tapered Elliptical Progressive Sidecut to smooth out turns initiated with speed and Slimewalls® to reduce vibration and dampen all the conditions that Mother Nature can throw your way. A Sintered, Stone Ground base sucks up wax to keep you mobbing all winter and Carbon Array 3™ gives you plenty of pop if there's an obstacle you prefer to ollie instead of going around it. This board is all the smoke in every way and it's ripe for the rippin' this winter.

Style Name**WILDLIFE****Style Number****R2102011****Overview**

The Wildlife is a do-everything directional board. The directional hybrid camber profile allows for snap and response. The rocker in the nose allows for effortless turn initiation and float in soft snow. The Quadratic Sidecut improves stability and edge hold. Slimewalls® provide a smoother ride by damping out high-speed vibrations and increasing durability. Topless construction improves durability and reduces weight. The softer flex and rocker profile give this board a versatile, all-mountain ride, suitable for all levels of riders.

Style Name**KINK****Style Number****R2102012****Overview**

The Kink is a street machine. Designed with a focus on predictability and durability for urban and park riding, the KINK is at home on handrails and jibs. The Kink is the board of choice for Jed Anderson and many team riders when riding in the street. Jed provided the graphics on this year's Kink, giving it a unique, poppy look on the topsheet and base for a little personality underfoot from one of the greatest of all time. Twin Hybrid Camber has camber underfoot for pop and smooth turn initiation with a minimal amount of rocker at the tip for predictable catch-free performance. A Quadratic Sidecut provides predictability and edge hold. Slimewalls® and Cleave Edge™ provide a smoother ride and increased durability. The sintered base is harder and more durable. The Kink is a board designed for modern freestyle and street performance.

Style Name
MAGIC STICK

Style Number
R2102016

Overview

The Magic Stick is designed for all-mountain performance. The tapered directional hybrid shape will ensure float in softer snow, while providing stability on harder snow. The camber between the bindings provides snap and response and the slightly longer nose has more rocker than the narrower tail, which both provide float and control in all conditions. A Tapered Bi-Radial sidecut provides effortless turn initiation and a smooth and stable turn/exit. Slimewalls® provide a smooth ride and increase durability underfoot. Carbon Array 3™ provides extra pop and control without adding stiffness. The Magic Stick is a mid-flexing all-mountain shape for the most demanding women riders.

Style Name**COMPACT****Style Number****R2102018****Overview**

The Compact is built for all-mountain performance. The directional hybrid rocker provides camber underfoot for snap and response with a long, rockered nose for float and turn initiation. Quadratic Sidecut improves turn initiation, exit and edge grip as well. Slimewalls® offer up a smoother ride and increase durability by absorbing impact. Roll-In sidewall construction increases board strength and reduces board weight. The Compact is a soft-flexing directional all-mountain board that allows riders of all ability levels to have fun on the mountain.

Style Name
ZERO JR

Style Number
R2102024

Overview

For little tykes that wanna go big, the Zero Jr. is a Twin Hybrid Rocker board that aims to reduce edge catching, make it easier to initiate turns so they can get the hang of the edge-to-edge transition of riding groomers and soften the vibrations that can cause kids to fall. Packed with similar construction as our adult-size Zero model, the Zero Jr. is the perfect way to introduce your little one to riding or let them take it to the next level if they have their feet solidly under them after a few winters on the hill.

U.S. Women's 5-11 (5.5, 6.5, 7.5, 8.5, 9.5)

Product Description:

The Context is a high-end women's lace snowboard boot. The traditional lacing system gives the rider the ability to lace their boot exactly how they want it. Fitted with Intuition™ Mobile Wrap Liner and mixed with a traditional lace and our BOA® powered Tongue Tied™ Fit System, it's snug and comfort at the highest level. Tongue Tied™ delivers a secure fit in the ankle and eliminates the need for a traditional harness. C.A.T. technology allows for a custom fit in the calf zone for increased comfort. The Context is designed as a stiffer flexing snowboard boot that is as at home in the park as it is on a powder day. The Waffle Flex Sole combines rubber with a +Slime Midsole for durable traction and comfort while internal shank adds support. The Context is designed as a stiffer flexing freestyle snowboard boot.

Durable, lightweight, tech and responsive. The A-10 is a high-performance machine designed to level up your riding

Colors

Black, White

Feel

10

Sizes

S, M, L

Product Description

The A-10 packs all of Ride's proprietary technology into the most advanced binding in the world. This is our high-performance model designed for the most demanding snowboarders and it is now officially a unisex binding, due to a smaller chassis option for riders of all foot sizes. The all new A-Series Aluminum Chassis provides the reactive flex and power transfer of aluminum with less rigidity than previous designs. The two-piece design allows for toe heel centering and a perfect fit for every boot size. The Carbon Slimeback™ Highback provides the response of carbon fiber with the damping of urethane for unmatched performance. The Three-Piece Ankle Strap combines foam and two different density plastics for comfort, durability, and performance, and it comes equipped with an aluminum mount disc and a composite mount disc for versatility. The aluminum disc will feel more aggressive while the composite disc will allow the binding slightly more flex underfoot. The canted footbed aligns your joints with a 2.5 degree angle while providing more leverage over the tip and tail of your board while the TPU basepad softens high-speed vibrations. The A-10 is designed for high-end performance and a very precise ride.

Product Description

The C-10 packs all the features of our A-10 model into our new composite platform. The C-Series Performance Chassis pairs an aluminum heel cup with a glass filled nylon base tray and is now offered in a smaller chassis size to make it a unisex binding. This two-piece design allows for ultimate toe heel centering for the perfect fit of any boot size. The aluminum heel cup provides the feel and durability of aluminum where you need it, while the composite tray offers a more damp and smooth ride than an aluminum chassis. The Three-Piece Ankle Strap combines foam and two different density plastics for comfort, durability, and performance. The Carbon Slimeback™ Highback provides the response of carbon fiber with the damping of urethane for unmatched performance. Available with an aluminum mount disc and a composite mount disc for versatility. The aluminum disc will make the tray feel more precise, while the composite disc will provide for more underfoot flexibility. The canted footbed aligns your joints with a 2.5 degree angle while providing more leverage over the tip and tail of your board. Integrated rubber pods make for an even smoother ride. The C-10 is a high-performance binding for the rider that prefers the response of carbon and the smooth feel of a composite tray.

A-9

Pricing

SIZES S, M, L

Tagline

A high-end binding in aluminum for lightweight response when you need it most

Colors

Black, Faded

Feel

9

Sizes

S, M, L

Product Description

The A-9 is a binding made for the aggressive rider who wants durability, response and aluminum to create a crisp feel underfoot and take their riding to the next level. The A-Series Aluminum Chassis is a staple in the Ride binding game while our new nylon highback improves response and rigidity. The Three-Piece Ankle Strap ensures that your foot won't be sliding around when initiating or exiting turns and the Canted Footbed with PODS technology is cushy for all-day comfort at just the right cant to give your turns the snap they need. If you're looking for a high-end binding that can so it all this winter, look no further than the A-9.

BOARD GLOSSARY

SIDECUT

01. QUADRATIC

Blending of three radii to improve turn initiation/exit while providing the best grip possible. This design is uniquely formulated for each model based on its shape and riding style.

02. ELLIPTICAL PROGRESSIVE

Designed exclusively for the Commissioner, this sidecut combines tight elliptical curvature at the tip and tail to provide low-speed initiation and response with a larger radial section between the feet for high-speed stability and tracking.

03. BI-RADIAL

A twin sidecut which allows for the underfoot width of a wide board in the tip/tail width of a standard size. This design provides improved leverage on landings, grip through turns, and stability on flat base.

04. LINEAR QUADRATIC

A directional sidecut utilizing Quadratic curvature from the tip to the rear insert pack, then progressing into a linear section into the tail. This creates smooth catch-free turn initiation and powerful support through the turn exit without losing grip.

05. LINEAR TWIN

A twin sidecut that allows for the underfoot width of a wide board in the tip/tail width of a standard size. This design provides improved leverage on landings, grip through turns, and stability on flat base.

ASYMMETRIC SHAPING

Asymmetric sidecut shaping improves heelside turn initiation and control. Offering perfect balance while turning through different radii for the heel and toe side edges, the board just feels right!

01. L.S.D. SHAPING (LADIES' SPECIFIC DESIGN)

Every women's board in our line has been specifically designed for the female rider. Featuring custom waist widths, flex patterns, and sidecut design, LSD Shaping results in a finely tuned board profile that works as one dialed package.

02. NEW! SPLIT TAIL SHAPING

Split Tail technology allows for more dynamic turn shape and board flex, creating a unique ride in powder and hard pack.

STEEL

RIDE's Austrian-made steel wraps the entire perimeter of your board for the best delam protection around.

01. STANDARD EDGE

Rockwell 48 C.

02. CLEAVE EDGE™ STEEL

Nearly 50% more steel, delivers unmatched resistance to edge cracking and can be detuned to larger radii.

FIBERGLASS

RIDE takes stitched glass to new levels and tailors it to each board's needs. Our unique glass designs are flatter and more consistent; therefore, they are stronger with no gaps or stretching that can be found in woven glass.

01. BIAXIAL GLASS

90° and 0° angles, fun and forgiving.

02. HYBRID GLASS

Triaxial on top, biaxial on base; balanced torsional flex and stiffness for better response with speed.

03. CARBON INFUSED GLASS

90° Carbon fibers stitched into the glass. Extra pop and response, without adding extra stiffness.

04. PRE-CURED GLASS

USA-made pre-cured fiberglass optimizes glass to resin ratios to create the most consistent flex pattern possible. No other glass provides this level of stability and control.

BASE

RIDE uses the highest quality Ptex base materials available for excellent durability and glide.

01. EXTRUDED

The industry standard extruded 1500 Ptex base material. Good wax absorption and easy to repair.

02. SINTERED

High-end sintered 4000 Ptex base material that is more durable, harder and faster than extruded.

03. SINTERED LOW FRICTION RACE BASE

The highest grade carbon-infused sintered base material available. Designed for speed.

TUNED CORE

RIDE blends the proven strength, pop and feel of wood with added dampening materials and composites. Mixing natural wood with high-energy "uppers" and vibration absorbing "downers" creates a core tuned for maximum snap and feel.

01. FOUNDATION™ CORE

Tip-to-tail Aspen wood core with proven durability that retains pop and flex.

02. PERFORMANCE™ CORE

High strength Aspen is combined with Bamboo and lightweight Paulownia wood to provide the perfect balance of strong and light.

03. WMNS PERFORMANCE™ CORE

Specially formulated for the women's line, this core combines lightweight Paulownia wood stringers with high strength Aspen. Available on every women's board.

04. PAULOWNIA

100% lightweight Paulownia wood for maximum performance.

05. NEW! SPLIT PERFORMANCE CORE

A mixture of Bamboo, Paulownia and Aspen to create a lightweight and responsive core with RIDE's exclusive SlimeWall® technology running through the core.

05. CARBON SLIMERODS

RIDE's Slimerods® give already fun and playful boards the added liveliness to set them apart from other boards. Using strategic placement in the boards tip and/or tail, this technology adds pop without the stiffness generally associated with snappy boards. Made up of flat carbon rods that wrap a urethane slime-core, Slimerods® have carbon for massive pop and a slime-core to smooth out the landing. Available in 2 levels: Slimerods® 1.0 & 2.0.

SIDEWALL

RIDE's responsive and smooth sidewall technologies level terrain input for consistent filtered feedback.

01. SLIMEWALLS®

RIDE's exclusive Slimewalls® are forgiving and ductile, absorbing impacts rather than defending against them. Just like your skate wheels, the urethane in Slimewalls® smoothes the interaction with the snow, wood or metal surfaces you may ride on. On top of all that, these babies are virtually indestructible, the most durable sidewalls in snowboarding.

02. CARBON SLIMEWALLS®

This totally unique sidewall combines layers of Slimewalls® material and carbon strategically placed at the inserts out to the contact points in the tip and tail on a twin, and the back inserts to the contact points in the tail on a directional board. This exclusive tech enhances the charging rider's experience as we have moved the carbon pop construction to the outside edge for better stability and enhanced response.

03. NEW!SLIM WALLS

RIDE's Slim Wall technology is the evolution of our Roll-in Construction to its extreme limit. By creating a fully 3-D composite structure over Slimewall® material, this revolutionary technology results in more efficient energy transfer, lighter weight construction, and even better damping.

04.NEW!CARBON SLIM WALLS

Further improving on Ride's revolutionary Slim Wall technology, Carbon Slim Wall integrates a full-length Carbon-Urethane composite laminate, that provides additional edge hold and energy transfer over our standard Slim Wall.

03. ROLL-IN CONSTRUCTION

Unique 3D structure built around our urethane Slimewall® sidewalls. Designed to increase overall board strength, prevent topsheet chipping, and reduce weight.

LAMINATES

01. CARBON ARRAY™

This power distribution technology provides total board control in every stance location. Widespread carbon stringers placed at the binding zone gather input from any stance width and all pressure angles. Rider input is then channeled to the opposing contact point for maximum board control. Offered in two levels of technology, 3 & 5.

02. SILENCER 5™

Specially designed urethane layers purifying the response from our Carbon Array™ 5 by filtering out vibration for a super smoothed-out, yet snappy feeling.

03. LINEAR CARBON

Two strips of carbon added below the core provide more snap for ollie power.

04. IMPACT PLATES

Added underneath each binding area to improve compressive strength and prevent board breaks where it matters most. Offered in two levels, Single and Double.

05. ALUMINUM CONSTRUCTION

Racing-inspired construction utilizing 5230-T6 Titanal Aluminum for improved torsional stiffness, damping, and control at high speeds.

THIN CON

All RIDE boards feature Thin Construction with tapered tips and tails. This reduces swing weight, enhances tip flex, and improves overall durability.

TOPSHEET

01. STANDARD TOPSHEET

Durable Urethane topsheet material with graphics only RIDE can bring you.

02. TOPLESS CONSTRUCTION

By transferring graphics directly to the fiberglass, Topless Construction removes the need to have any topsheet material. This process improves overall durability and reduces weight.

03. WOOD VENEER

Real wood Birch veneer topsheet sealed with urethane for a unique look and a smooth ride.

04. ALUMINUM/CARBON

Racing inspired technology that balances the strength and damping abilities of anodized Titanal aluminum with the stiffness and rebound properties of woven carbon fiber. These two materials have been specifically designed together to improve the board's edge hold, turning power, and overall speed while reducing weight.

BOOT GLOSSARY

+SLIME MIDSOLE

RIDE's proprietary foam blend improves comfort and response underfoot.

HDR PREMIUM SYNTHETICS

RIDE's Premium PU material utilizes a proprietary resin that substantially improves durability and wear resistance. Used in high abrasion zones where bindings and board edges create focused wear, RIDE's Premium PU has unmatched performance.

BLACK GOLD™ LINER MESH

This bamboo charcoal infused material naturally mitigates odors and moisture. Other benefits include quick drying, improved temperature regulation, and circulatory function.

ADJUSTABLE POWER STRAP™

RIDE's Adjustable Power Strap™ technology offers a range adjustability to customize strap length while providing added boot support and response when you need it.

TONGUE TIED™

This RIDE specific technology offers a secure fit in the ankle zone and eliminates the need for a traditional harness. The tongue integrated lace guides provide total tongue closure and next level heel hold without the potential pressure points. Depending on the model, Tongue Tied™ comes in a manual pull or BOA fit system. Tongue Tied™ is paired with traditional lace, Boa® Focus, or Boa® Coiler Fit Systems.

NEW! TONGUE TIED™ HYBRID HARNESS

This newly updated RIDE specific technology takes the Tongue Tied™ system to the next level. An upper harness coupled with the standard Tongue Tied™ system provides an improved fit and feel that keeps you even more secure. The tongue integrated lace guides provide total tongue closure and next level heel hold without the potential pressure points. Depending on the model, Tongue Tied™ Hybrid Harness is paired with traditional lace, Boa® Focus, or Boa® Coiler Fit Systems.

FLEX SLIME TONGUE™

RIDE's second generation Slime Tongue™ developed with an articulating flex zone uses geometric shaping to improve riding comfort and performance. Durable TPU keeps a consistent ride over a longer life of the boot.

SLIME TONGUE™

The RIDE exclusive Slime Tongue™ reduces breakdown in forward flex for a more consistent ride over a longer life of the boot. The revolutionary injected urethane design provides impressive rebound and dampening, allowing the rider to ride longer, harder with less fatigue.

FIBER REINFORCED FLEX SLIME TONGUE™

The fiber reinforced TPU material turns the second generation Slime Tongue up to 11. The addition of fibers offers enhanced performance and responsive feel. Only offered on TRIDENT and INSANO boots.

REBOUND HEELCOUNTER 2.0™

Dual density injected TPU heel counter offers the ability to tailor the flex in the boot while providing the durable performance of TPU.

REBOUND HEELCOUNTER™

RIDE's Rebound TPU heel counter generates lively flex season after season. The highly durable TPU molecular structure allows for superior toughness where you need it most. Now offered in ladies specific boots.

FLOATING TONGUE™

RIDE's unique floating tongue technology combined with Tongue Tied™ lacing adds additional adjustability to dial in comfort over foot while reducing pressure points.

TPU TOE CAP

Injected TPU toe cap substantially improves durability and simplifies toe construction.

RUBBER TOE CAP

RIDE's rubber toe cap construction reduces boot profile while improving overall durability. The sleek look brings in low key street cred on and off the mountain.

IN2GRATED™ CONSTRUCTION

In2grated™ Construction creates the lightest weight, shortest length performance boots on the market, hands down. The liner is factory molded inside the shell to create the most efficient "net fit", leading to less pack out for better overall comfort.

LSD C.A.T. (CALF ADJUSTMENT TECHNOLOGY)

Designed specifically for ladies to increase comfort and ensure a perfect fit. This Velcro adjustment on the boot cuff allows for a one-of-a-kind custom fit in the calf zone.

THE CLOSER™

Offers two times the power to close your boot securely. The Closer™ Lace Guide is centered over the forefoot to drive lace power down low to even the lace tension throughout the entire boot. Accompanied by BOA® Fit System, the even-tightening of The Closer™ Lace Guide takes speed lacing to the next level and provides an incredibly comfortable fit.

HEAT REFLECTIVE FOIL

Redirects heat underneath the foot and in the toe to help keep in the toasty warmth while charging up last chair.

NEW! RIDE RENTAL

ANTHEM and LASSO boots on steroids to turn durability up to the max. Rental specific rubber toe cap, eyestay, and heel cap with full rubber bottom ZIG-ZAG FLEX outsole. Full HDR synthetics with an Intuition foam layup. Liner entry is simplified to offer a comfy supportive fit. New BOA H4 rental shield protects the tongue dial from abuse.

BOOT LASTING

RIDE offers 1:1 lasting ensuring a seamless liner to shell integration for all whole and half sizes. Liner lasts anatomically shaped to your foot offers premium out of box liner comfort while shell last shaping precisely merges together for a uniform supportive fit.

01. GREY LAST

Designed for non-removable liner boots.

02. SILVER LAST

Performance designed, men's specific fit.

03. BLACK LAST

Performance designed, men's tailored fit.

04. JADE LAST

Performance designed, women's specific fit.

05. WIDE LAST

Performance designed, men's tailored fit offered in EE Width.

INTUITION™ HEAT MOLDABLE FOAM LINERS

Offered in four varieties, RIDE's Intuition™ Foam can be custom formed on in-store heaters or will form to the shape of your foot over the course of a few days of riding. Combining Intuition™ Liner technology and Black Gold™ liner mesh creates the lightest, warmest, best-forming, longest-lasting liner available.

01. INTUITION™ PLUSH FOAM

Medium-density foam delivers the ultimate plush feel for all day comfort.

02. INTUITION™ SUPPORT FOAM

Enhanced high-density foam offers supportive performance with maintained comfort.

03. INTUITION™ MOBILE FOAM

Dual-density foam creates performance with freedom of movement.

04. INTUITION™ DREAM LINER

Multi-density foam surrounded in a supportive skeletal structure for maximum rebound and dreamy performance.

LINER FIT

These added features improve the overall fit of the liner for maximum comfort and response.

01. WRAP LINER

Builds additional stability and life into the liner. Creates seamless comfort combined with Tongue Tied™ system.

02. CORED ANKLE POCKETS

Anatomically correct fit for ultimate heel hold.

03. INTERNAL J BARS

Superior ankle and heel hold with added support.

04. EXTERNAL J BARS

Additional ankle and heel hold.

UNDER FOOT SUPPORT

The goods that keep your feet comfy when you're in your boots all day long.

01. DIE CUT EVA

Solid, proven support and comfort.

02. 3D FORMED DUAL DENSITY EVA

A soft EVA for comfort and a harder second density for extra foot support where you need it.

03. IMPACTO™ INSOLE

Multi-density insole with an added support structure and impact element in the heel for cush landings and all day comfort.

LACING

A variety of proprietary liner and shell lacing systems are available throughout RIDE's boot collection.

LINER LACING

01. LOCK DOWN™ TURBO

A secure, no slack lace mechanism to lock your laces in place.

02. TRANSITION WRAP HARNESS™

A mobility-focused lacing harness that curves from the side of the foot to the top for freestyle agility, comfort and wicked heel hold.

03. TALLBOY HARNESS™

Ideal for all around performance, the Tallboy extends higher above the ankle with a fourth lace loop for a supportive flex and responsive fit.

04. TRAP WRAP CLOSURE

New G-hook with Velcro top power strap closure used specifically on wrap liner for improved range of fit.

SHELL LACING

01. TRADITIONAL

Standard lacing, tie 'em up just like your sneakers.

02. Boa® FIT SYSTEM

The standard Boa® dial offers a quick and easy speed lace system.

03. Boa® COILER FIT SYSTEM

Dial activated fit system that retracts slack in the cables. Quick, durable and easy to use.

04. NEW! Boa® ZONAL FIT SYSTEM

Dial activated fit system that allows for a precise closure in two zones. Features high-powered H4 tongue dial with mid-powered M3v2 remote side dial.

05. Boa® FOCUS FIT SYSTEM

Dial activated fit system that allows for a precise closure in two zones. Features high-powered H4 tongue dial with high-powered H4 remote side dial.

06. TONGUE TIED® FOCUS FIT SYSTEM

Dial activated two zone fit system that integrates tongue tied in the upper zone for added heel hold.

07. MANUAL TONUKE TIED SYSTEM™

Pull activated lacing system that quickly and effectively locks in heel hold.

08. NEW! TONUKE TIED™ HYBRID HARNESS

Boa® dial activated internal fit system that has upper shell harness integrated with the tongue tied system for secure fit and feel.

09. KIDS Boa® FIT SYSTEM

Found on our kids' models, makes for a quick and easy lacing solution.

*** Adding to the ease and performance of RIDE's Boa® boots, they now come with the Boa® Dialed in For Life Guarantee. Boa® Technology guarantees the Boa® Fit System reel and laces for the lifetime of the product.*

SOLE

Providing support and stability, the sole is what gets you around and keeps you on your feet.

01. GRIP LITE SOLE

+SLIME Midsole combined with rubber pods for maximum durability and ice traction.

02. JADE PLUS SOLE

Women's specific sole built with durable rubber construction with internal high rebound EVA midsole. Improved heel contour for reduced heel drag and better walkability in all terrain.

03. FLEX LITE 2.0

Improves impact absorption with +SLIME midsole, stability and traction is maintained flex by utilizing Rubber pods underfoot. Unique channels allow for improved performance freestyle feel.

04. ZIG-ZAG FLEX

This outsole is designed with performance and durability in mind. Improved lug shaping allows for freedom of movement while the internal shank keeps a predictable stable feel. Full rubber bottom with impact absorbing +SLIME midsole and internal shank all come together in this outsole to offer an enhanced ride.

04. MICHELIN® SUMMIT

This sole is a durable blend of Michelin® rubber and phylon that makes for a super lightweight performance sole.

05. MICHELIN® FIBERLITE

This sole features light-weight, mesh backed WIC and OC rubber compounds and +SLIME midsole providing responsive cushioning with dual density support.

06. NEW! MICHELIN® TRAVERSE

This sole features a unique criss-cross external TPU shank for improved stability. The durable WIC and OC rubber compounds along with Michelin designed tread patterns provide optimal traction on snow and ice. The +SLIME midsole offers responsive cushioning while the underfoot geometric recess pattern provides improved board feel.

BINDING GLOSSARY

CHASSIS

Ride offers 3 distinct chassis designs for all types of riders. All Ride Bindings feature an extruded aluminum heel-cup. This unique design allows for toe heel centering for ultimate adjustability between boot sizes assuring that riders will not have to think about toe or heel drag. Extruded aluminum is strong and responsive; by using this material in the heel-cup Ride bindings provide ultimate toe heel response.

01. A-SERIES CHASSIS The A-Series Chassis provides the reactive flex and power transfer of aluminum underfoot. The extruded aluminum heel-cup provides ultimate toe heel response. The A-Series Chassis was designed to be less rigid than previous designs allowing the aluminum to flex more under the rider's weight allowing for a much more reactive ride. Because the Chassis is 100% aluminum, it is narrower than nylon or plastic chassis allowing the board to flex more freely from tip to tail.
02. C-SERIES CHASSIS The C-Series Chassis pairs the extruded aluminum heel-cup with a polycarbonate base tray. The heel-cup provides ultimate toe heel response, while the polycarbonate tray underfoot offers a comfortable and smooth ride.
03. C-SERIES PERFORMANCE CHASSIS The C-Series Performance Chassis is the same Chassis as the standard C-Series chassis, but with 20% short-glass injected into a nylon tray. Injected short-glass makes the chassis more responsive while the nylon composite provides a smooth ride.

HIGHBACKS

RIDE bindings feature unique designs that match with our chassis systems to make a complete binding line offering optimum performance for all riding styles and abilities. All highback models feature Stance Correct shaping which matches the angle of your natural riding stance and is the combination of twist, cupping and asymmetrical flex patterns. Stance Correct shaping provides lateral support and medial flex for the proper balance of support, control and mobility.

01. NYLON
Traditional Highback material that offers a predictable mix of response and comfort.
02. SLIMEBACK™
Highbacks utilize urethane similar to our Slimewalls® technology. The Slimeback™ material absorbs shock and damps vibrations to help smooth the ride while providing fluid support.
03. CARBON SLIMEBACK™
Made from laminated carbon and urethane, this unique highback offers the lightweight support and pop of carbon with the smooth dampened ride of urethane.

ANKLE STRAPS

Pre-curved 3-D shaping provides even pressure distribution over the instep for the best in control and comfort. We use multiple different straps in our line.

01. THREE-PIECE ANKLE STRAP.
Designed to provide ultimate comfort the three piece strap has a rigid plastic piece to provide the response of the binding. This is paired with another urethane piece that assures the strap is comfortable and stays in place over your boot. Finally there is a small amount of padding that compresses without bunching up to assure a tight fit for riders who like to ride their straps super tight.
02. TWO -PIECE ANKLE STRAP.
Designed to provide comfort and response. The two piece strap utilizes two different types of plastic, one more rigid strap to provide the necessary response and another urethane piece that assures the strap is comfortable and stays in place over your boot. There is no additional padding to bunch up and create hotspots on your boot.
03. ONE-PIECE ANKLE STRAP.
Designed for comfort and durability. The single material strap provides response and comfort in a utilitarian package that wastes nothing.
04. REVERSIBLE ANKLE STRAP
Designed to be worn in two positions: one for hard charging, performance and the other for a more relaxed feel that lets you really lean into your ride. Utilizes a strong upper and a soft flexible lower portion to support all of your riding needs.

CONVERTIBLE TOE STRAP

Over-the-top, over-the-toe, anywhere in between... keeping the choice in the rider's hands. All RIDE toe straps feature the easy-to-use flip lever centering adjust.

01. MINIMALIST TOE STRAP
Designed to offer maximum performance and durability with minimum weight and distraction.
02. MINIMALIST TOE STRAP WITH OVERMOLD
The minimalist toe strap with overmold is the same base strap as the minimalist toe strap with the addition of an overmolded layer of urethane that assures the strap stays in place over the riders desired position over the boot.

RATCHETS

Our ratchets are designed in-house for maximum performance, durability and ease of use.

01. LINKAGE RATCHET
Designed to improve ladder durability and eliminate ratchet wag, resulting in a smoother user experience with the same hold you expect.

FOOTBED

Formed EVA shockpads that are vibration dampening and shock absorbing for the best in comfort and improved control.

01. CANTED FOOTBED WITH PODS
An ultra-light footbed that uses subtle angles to align the ankles and knees to a more natural and comfortable position. The angle also gives leverage to press the board for huge pop, without affecting your preferred stance width. Urethane pods are bonded to the footbed under the heels and forefront of the riders foot. These pods absorb high-speed vibrations for a smoother ride as well as smooth out larger impacts from flat landings.
02. CANTED FOOTBED
An ultra-light footbed that uses subtle angles to align the ankles and knees to a more natural and comfortable position. The angle also gives leverage to press the board for huge pop, without affecting your preferred stance width.

BASEPADS

01. C-SERIES EVA BASEPAD
An extra cush EVA Basepad that wraps under the binding and up the sides to damp out vibrations and make for a smooth ride.
02. C-SERIES DIECUT
A minimalist EVA pad that sits under the binding to damp out vibrations
03. A-SERIES TPU
A urethane base pad that sits under the binding and wraps up the side. The urethane provides ultimate damping properties underfoot and support as it wraps up the side of the binding increasing response as the riders drives their weight into turns.
04. A-SERIES DIECUT
A minimalist pad that sits under the binding to provide vibration damping.

DISCS

All Ride discs are interchangeable. Both the Plastic Disc and the Aluminum disc can be used for the A-Series and the C-Series bindings.

01. PLASTIC DISC
The plastic disc offers more lateral flex than aluminum for the rider that is focused on comfort and flex over hard charging performance
02. ALUMINUM DISC
The Aluminum disc is more rigid than the plastic disc. This disc is suited for the rider demanding precision in their binding.
