3 DENSITY WRAP LINERS

New liner concept based on the idea to differentiate the material properties of the liners layers in order to optimize the performance. A first layer of softer foam around the foot for comfort, a second layer of harder foam to structure the liner and finally the PuRE technology (PolyUrethane recycled Enforcement): a sturdy layer of Recycled PU for better power transmission. The manufacturing process is also revolutionary: the liner is pre-heated and formed around a metal foot by applying pressure from the outside, so the internal geometry of the liner is controlled and provides an excellent first fit.

3DENSITY WRAP MAX HIKE

1) Softer foam around the foot for the best comfort

2) Harder foam to structure the liner

2) PuRE Technology For a better power transmission (PU recycled enforcement)
