# T H E V Ö L K L W A Y

## VÖLKL ENGINEERING

We are committed to continuous development and enhancement, merging German engineering with state-of-the-art manufacturing and meticulous craftsmanship at our Straubing production facility to create top-tier sporting goods.

## DATA

To learn and progress, we don't rely solely on our experience, but also analyze data from our global ski community.

## CONSUMER INSIGHTS

### We focus on our consumers!

The invaluable insights into understanding their needs, preferences, and behaviors are of utmost importance for the development of our skis.

## VÖLKL OBSESSION

With our unparalleled obsession for precision, attention to detail and quality enable us to improve our products constantly while shifting borders. Built to win.

# BUILT TO WIN

## HIGHTECH IN MATERIALS & PROCESSING

A core benefit of developing and producing in Germany is the access to the most cutting-edge materials, combined with our constant investment in high-tech processing.

## ATHLETE INSIGHTS

Our athlete involvement and the invaluable insights from our fantastic team are propelling our product development to new heights.

## COMMITMENT TO SUSTAINABILITY

By staying at the forefront of ski technology, we provide superior skiing performance while our commitment to sustainability preserves the natural beauty of the mountains for generations to come.

## VÖLKL TESTING

We test every single ski in each specific length. Without exception. No ski goes into production without the approval of our experienced test team.

## TEAM

At Völkl, we're a global team united by our love for the perfect turn on snow. Together, we harness our collective power to create the magic that happens out on the mountain.

# FOCUS ON SUSTAINABILITY

## DONE IN 2023

- Increase FSC & Greencore wood material
- Automization of building control system
- New extraction in sanding / grinding department
- Optimization of ventilation system

ENGINEERED IN GERMANY

# SUSTAINABILITY FACTS

## 100% RENEWABLE ELECTRIC ENERGY

Production using electricity from Danube hydroelectric power station „Kagers“, not even 8 km from the factory

## 2024: 100% CO<sub>2</sub> NEUTRAL ENERGY

- 100% renewable electric power
- 100% CO<sub>2</sub> compensated gas, certified by TÜV Rheinland
- 4700 t CO<sub>2</sub> savings per year

## CO<sub>2</sub> REDUCTION IN PRODUCTION SUCH AS:

Numerous energy-saving projects such as:

- Milestone: since 2014 energy management system certified according to DIN ISO 50001
- Heat exchanger for preheating the air in the factory
- Using waste heat from compressors to heat screen printing and pre-production
- Cooling of the presses in winter with outside air instead of chillers
- Conversion to LED lighting
- Automatic shutdown of the compressed air network in non-working time

## SHORT DISTANCES SUPPLY CHAIN FOR SKI MATERIALS

28% Bavarian suppliers  
63% German suppliers  
100% European suppliers

## LESS USE OF PACKAGING MATERIALS

Circle system of collapsible boxes between GER, USA, CAN. Circle systems of rolling carts with selected EU customers

# TAILORED TECHNOLOGIES

## TAILORED FIBER PLACEMENT

*One of our latest technologies is Tailored Fibre Placement. In this innovative manufacturing process the Tailored Carbon Tips are produced by embroidering the individual carbon fibers onto a carrier material.*

This allows them to be positioned exactly along the stress lines, opening up plenty of possibilities, for performance at the front of the ski, which has a decisive influence on the handling of the ski. The stiffness, torsion and thus the skiing characteristics can be specifically adjusted via the fiber thickness and millimeter-precise alignment. In this way, the fibers guide the dynamics to the areas of the ski where they are needed. The visibly integrated Tailored Carbon Tips are light, allow an agile shovel reaction with less effort and quickly build up energy. The Tailored Carbon Tips thus reach a next level of precision, direct tip response and active skiing pleasure.

## TAILORED TITANAL FRAME

*In this technology the width of the titanal frame is adapted exactly to each individual ski length.*

This results in Tailored Titanal Frames, which are positioned above the sidewall along the tip and tail area of the ski to provide the desired damping and torsional stiffness. The size of the frames is tailored to the skier's height, skiing ability and power. This means that longer ski models have a higher titanal content for more stiffness, more direct power transmission and stronger dampening. The shorter the length, the lower the titanal content, which makes the ski more agile, so that smaller, lighter and less powerful skiers can use the full potential performance of the ski. In addition to the Tailored Titanal Frames, a second, thinner titanal layer is located in the binding area, which gives the ski the necessary strength, but also agility. The result: the Tailored Titanal Frame technology provides an incomparable combination of agility and high speed control.

Multiradius concepts for maximum versatility for various snow conditions, both on-piste and off-piste, with increased stability on hard surfaces and improved performance in soft snow.

## 3 D RADIUS

### R1

Usage of long radii at tip and tail for big turns and high speed  
 // easy steering and maneuverability  
 // disruption resistant at the tip  
 // no radius limitation and ease of turn exit

### R2

Usage of shorter radius in the center for short turns and lower speed  
 // extremely easy to initiate short turns  
 // strikingly agile  
 // effortless and smooth in short turns

### R3

Usage of long radii at tip and tail for big turns and high speed  
 // easy steering and maneuverability  
 // disruption resistant at the tip  
 // no radius limitation and ease of turn exit

## 4 RADIUS DRIVE

### R1

**RADIUS:** Approx. 20 m in the frontmost 10 centimeters  
**FUNCTION:** A tighter radius only in the shovel to achieve a more immediate response to the skier's initial edge movement; maximum precision and agility

### R2

**RADIUS:** Approx. 40 m in the area between the shovel and the binding  
**FUNCTION:** The open radius in the front part of the ski gives the ski more resistance to disturbances and stability at speed

### R3

**RADIUS:** Approx. 15 m in the area under the binding  
**FUNCTION:** The tight radius in the camber area provides the ski with more agility even with slight edge movements of the skier, ensuring the necessary buildup of dynamics for short turns and radical carving curves.

### R4

**RADIUS:** Approx. 25 meters in the area behind the binding up to the ski end  
**FUNCTION:** The moderate radius at the ski end ensures controlled and situation-adapted dynamics at the end of the turn and provides optimal support for transitioning into the next curve.

# WOODCORES

CHARACTERISTICS	MATERIAL BENEFIT	MULTILAYER WOODCORE	MULTILAYER WOODCORE LIGHT	HYBRID MULTILAYER WOODCORE	WORLD CUP ASH WOODCORE	WORLD CUP WOODCORE
	<b>MULTILAYER WOODS</b> A combination of lighter, softer poplar wood and heavier, stronger beech wood provides a target group specific combination between light weight, strength, durability and damping: The beech typically concentrates where the most power is needed in the ski - like under the binding or alongside the edges and sidewalls.	X	X	X		X
	<b>ISOCORE</b> The addition of ISOCORE to the wood core helps to save weight and support dynamics, pop and agility.			X		
	<b>SLOTTED</b> Slots that get milled into the wood cores - with the number of slots varying according to the target group of the ski - helps to save weight and optimize the flex pattern towards a softer characterisitc.		X	X		
	<b>ASH (%)</b> Ash - the wood of the gods in ancient times - provides the best dynamic properties of any woods in skiing. At the price of heavier weight, a maximum of power transmission and dynamics can be found in skis with ash cores.				100%	50%

## GREEN CORE

- // All GreenCore woods are FSC certified
- // Environmentally friendly glue
- // Foam: recycled PET

GREEN CORE

# ROCKER

Our rocker construction is directly integrated into the production cycle, so the rocker shape doesn't need to be bent afterwards, which makes the matching between the rocker and the other components much more harmonized and precise:

- // easier turn initiation
- // effective edge length extends when putting the ski onto the edge
- // additional uplift for off-piste skiing

### Full Rocker

Character: The ski is bent at a constant curvature along its entire length

### Tip & Tail Rocker

Character: Bends up only in the shovel and tail zones, with a camber shape in the middle

### Tip Rocker

Character: Only bends upwards in the shovel area, while the middle and tail of the ski feature a camber shape

## ASH WOOD CORE

The high-quality core made of solid ash, which extends over the entire length of the ski, is a technical highlight that has great impact on the skiing characteristics.

The particularly elastic hardwood has only been used in racing skis for World Cup athletes and acts as an energy accumulator: while the ski flexes when initiating the turn, the fibers stretch and absorb the tension energy. At the exit of the turn, this accumulated energy is released, giving the ski enormous dynamics. Due to the specific stretching behavior of ash, the ski also adapts optimally to the surface. This results in the greatest possible stability and reliability, which makes the ski particularly smooth.

## RMOTION 3 GW

Exclusive Marker Völkl plate-binding system for our on-piste skis

### BENEFITS

- // Smooth & consistent drifting at moderate speed
- // Tighter turns with less efforts at higher speeds

# DEDICATED BASE STRUCTURES

### POLISHED SKI BASES ENHANCE ...

- ... greatest gliding characteristics
- ... optimal base treatment options
- ... long lasting effects

### DEDICATED SKI BASE STRUCTURES HAVE A STRONG EFFECT ON ...

- ... agile, precise & reliable turn initiation
- ... tighter turns with less efforts
- ... smooth drifting

After one year of intense testing we defined the following dedicated base structure for the relevant target groups / areas of use:

### ZEBRA STRUCTURE

on system / premounted skis with **narrower widths**

### BRUSHED STRUCTURE

on flat skis with **wider widths**

### STRUCTURE DEPTH

superficial —●— pronounced

Very pronounced & deep structure to offer the best possible precision & steering characteristics for an on-piste ski.

superficial ●— superficial

Superficial & shallow structure matches with wide skis and their bigger bearing face > optimum agility & turning characteristics.

# FLY HIGH. GET HYPED.

YOUNG, WILD AND SKI  
PERFECTION ON THE SLOPES.  
ABOVE AND BESIDES.

## 3D RADIUS SIDECUT

**BETTER VERSATILITY  
FOR MORE PLAYFUL  
SKIING**

## TAILORED CARBON TIP

**MORE TIP AGILITY  
FOR QUICK SHORT  
TURNS**

## NEW TIP GEOMETRY

**MORE DIRECT,  
PRECISE & RELIABLE  
TIP ANSWER**

You're wild. You're fast. You're beyond average. You fly high. Get hyped. You're literally flying above all types of terrain, both on the slope and beside it. Feeling completely hyped about the peregrine's performance. It feels remarkably easy, yet still fast and powerful without sacrificing precision. While you're charging at full speed, there's only one thought in your mind: *It's definitely going to be an epic time with your brand-new skis.* More at [volkl.com/peregrine](http://volkl.com/peregrine)

MARKER

# EOC FAMILY BINDINGS

## Exciting News:

Völkl is teaming up with MARKER for a special edition binding on selected skis.

We're thrilled about the fantastic collaboration with MARKER, featuring the Squire 11 bindings for the Völkl Revolt JR Urban and the Jester 16 bindings for the Völkl Blaze. Elevate the skiing experience with this incredible fusion of Völkl innovation and MARKER excellence!

# SMART SKIN CLIP

The innovative Smart Skinclip system allows the ski tourer to decide for himself, depending on the situation, in which direction he should pull the skin on and off.

A standard snap hook at the tail end of the ski allows the skin to be attached and detached from behind. The skin can, however, also be pulled on and off quickly and easily from the front. This new flexibility is made possible by an elastic snap hook, which is also easy to grip with gloves. A subtle depression in the ski tip gives the hook lateral guidance and prevents it from unintentionally releasing the skin while walking.
